## Information

### Overview

#### Functional principles

Damping mechanism works in conjunction with activator; mounting of each on moving or fixed object of application depends on the application specifics.

Activator catches the trigger - pushes the piston rod to activate damping function.

#### Technical details

Temperature range	-30 °C to 70 °C
Stroke length	50mm or 100mm
Load capacity	15kg to 120kg
Damper force	2.5N to 22.5N
Spring force	4.3N to 17N
Damping characteristics	flat, progressive, MultiStage, with final release

#### Direction of movement

Depending on the application the user can choose from various options of movement: from outside-in, inside-out or both directions.

A position of trigger on Slidix defines the direction of movement. Pictures below show trigger in released position.

#### Inside-out

Slidix TB  
Slidix TC  
Slidix TE

Trigger is positioned on the inside of Slidix mechanism for damping towards end of the mechanism.

#### Outside-in

Slidix II  
Slidix TA  
Slidix TF

Trigger is positioned on the outside of Slidix mechanism for damping towards inside of the mechanism.

#### In both directions

Slidix Centro

Slidix Centro has double trigger centered in the middle to enable damping from left/right towards centre.
